

Introduction

Overseerr is a fantastic platform to request new content for the Nasmans server. It functions as a search engine for any media available on TVDB en TMDB, and enables you to request a movie, a whole show or just a select season within a few clicks.

Apart from this, Overseerr also provides insight in recent requests, content available on the server, request progress and an issue tracker.

In short: it's the perfect content management platform. Please, please, please use Overseerr. It saves me a massive amount of time, as I just have to press a single button (most of the time) instead of having to reply to you and having to manually add/search for the content.
