General information about Plex Rewind

- [Introduction](#)
- [Usage](#)

# Introduction

So, Plex Rewind. What does that even mean? Well, imagine Spotify Wrapped or YouTube Rewind. This is pretty much identical, except it's just about the Nasmans Plex-server.

I personally really like statistics and know a lot of people that enjoy the recaps provided by Spotify/YouTube. When I saw this functionality was available for Plex, I just had to host it. Do with it what you will, or don't. It's just for fun, nothing vital for functionality here.

# Usage

Plex Rewind has two main sections. When you go to <https://rewind.nasmans.nl> and log in, you can choose either.

## Rewind

The Rewind-section is private and unique to you. If you click it, you'll see a grey, empty page for a few seconds. This is normal! Just wait for it to load. This happens because Plex Rewind is created live and spans the period "1 year ago - now", regardless of when you start it. It's not prepared/prerecorded for a set interval, like with YouTube or Spotify.

You can pause your Rewind by pressing the pause-button in the bottom right corner.

Pretty much all information in Rewind is correct, except for the filesize metric. For some reason it doesn't understand how to calculate this correctly.

## Dashboard

The dashboard contains more statistics in a little less personalized way. It gives a small insight into the other users of the server, and gives you the option to filter data to your liking.

At the top you can select a library. In the top-right corner, you have a few filters to get more specific data. At the bottom you may select an interval for the filtered data.

Again, pretty much all information in the dashboard is correct, except for the filesize metric.
