Introduction

This document is a manual on how to connect a Kobo eReader to the "Nasmans Library". The document will guide you through the prerequisites, functions and best-practices using a step-by-step guide. It should be comprehensive and clear, but if you find anything I missed or forgot, don't hesitate to leave a comment in the Nasmans Library FAQ on the Wiki. I can't guarantee an immediate response, however, I'll try to get to it as soon as I can and will try to update this guide accordingly.

"Nasmans Library" consists of a small stack of fully integrated tools. A database managed using Calibre, downloads that are managed through Readarr, and a nice, user-friendly interface provided by Calibre-Web. As an end user, you should only ever have to interact with Calibre-Web. There will be some mention of the other tools later in this manual, but this will only be related to automation. "Nasmans Library" currently contains a collection of about 12500 books, but will be expanded in the future. The current collection consists of mostly Dutch and English language books.

WARNING: You're doing this mod at your own risk. I will not assume any responsibility for any broken or bricked devices, lost data, or any other damages you may incur due to using this service. If carried out correctly, this mod should be perfectly safe but installing/using it will always be at your own risk.
